

Our Land and Water National Science Challenge

Stocktake of Indicator Projects September 2017

Dr Richard McDowell
Chief Scientist
Our Land and Water National Science Challenge
AgResearch – Lincoln Science Centre

2 October 2017

Dear Richard,

As per our contract received 4 July 2017, please find attached our stocktake of indicator projects. This report collates the information received from members of the Indicators Working Group and other agencies listed in Appendix A. Please note that this report should be read in conjunction with the restrictions at the end of this report.

Best regards,

A handwritten signature in black ink, appearing to read 'W- VSB', with a long horizontal flourish extending to the right.

Dr Bill Kaye-Blake

Director

Consulting

Our Land and Water Challenge mission

Mission

The Our Land and Water National Science Challenge has been charged with transforming the agriculture sector in New Zealand. Its mission is to enhance primary **production and productivity** while maintaining and improving our **land and water quality** for future generations.

The two long-term goals of the Challenge are to:

1. double the total value of export production to close to 40 per cent of GDP (**Economic** goal)
2. improve the performance of key indicators of land and water resources by 20 per cent at the enterprise and catchment scales (**Environmental** goal).

Themes

The Challenge has three Themes

1. Greater value in global markets (**Economic**)
2. Innovative resilient land and water use (**Environmental**)
3. Collaborative capacity (**Institutional**).

The **Nexus** brings these themes together through strategy, leadership, co-ordination and integration.

Indicators Working Group

To support the overall mission, the Challenge has convened a working group on indicators.

The working group brings together three elements:

- **Government** – setting policy and measuring against targets
- **Industry** – making land-use decisions
- **Scientists** – generating indicators through research.

The working group is supporting the goals of the Challenge by **coordinating and disseminating** existing work on indicators, and by identifying gaps and **providing direction** to the work of the Challenge and other organisations.

The aim is to find the right indicators, and encourage and enable their use.

Stocktake of indicator projects

The Challenge needs to be able to clearly define the indicators and metrics it is using to measure progress against its two overarching goals. To do this it needs to understand both what indicators have already been developed and what gaps exist in the scheme of work being done on agri-environmental indicators.

We engaged with the member agencies of the Indicators Working Group and other relevant organisations in the New Zealand science and agriculture system to collate a stocktake of existing work on agri-environmental indicators relevant for the Challenge. Some of these focus on environmental linkages, while others focus on economic and production data.

The following tables present the known projects underway or completed across three areas:

- Government projects
- Industry projects
- Science projects.

This list may not be comprehensive, but can be updated over time as new work develops. We suggest that this information could be made available on the Our Land and Water website and maintained as a 'live' document.

Government projects

Project name	Project description	Lead agency / person	Project status	Indicator data collected	Data sources
Environmental reporting programme	<p>Presents indicators and trends of environmental reporting across five environmental domains (land, marine, freshwater, air, atmosphere and climate) and the cross-domain area of biodiversity.</p> <p>Domain reports are published every six months, and synthesis reports are published every three years.</p> <p>Data is collected largely by NIWA, regional councils and territorial authorities, and is presented at a national scale. Adjustments are made to ensure the data is nationally consistent.</p> <p>http://www.stats.govt.nz/browse_for_stats/environmental-reporting-series/environmental-indicators/Home.aspx</p>	MfE – Jean le Roux Statistics NZ	Ongoing since 2015	Indicators have been chosen for each domain. For land and freshwater these include: Land cover, Soil erosion, Soil health and land-use, Land pests, River nitrogen, Groundwater quality, Lake water quality, trends in nitrogen leaching from agriculture. Full list of indicators is available at http://www.stats.govt.nz/browse_for_stats/environmental-reporting-series/environmental-indicators/Home/Browse%20by%20topic.aspx	Local and central government and CRIs
MfE data service	<p>MfE publishes datasets of environmental variables under open licenses at https://data.mfe.govt.nz/</p>	MfE – Jean le Roux	Ongoing	Raw data rather than indicators across the five environmental domains. Tabular and geospatial data.	Local and central government and CRIs
Land Air Water Aotearoa (LAWA)	<p>LAWA collates and presents information from regional councils on air and water quality. Covers coastal water quality, freshwater quality and quantity, and air quality information. Data on state and trends is presented for each region down to the catchment and monitoring site level.</p> <p>https://www.lawa.org.nz/</p>	Collaboration between all regional councils, Cawthron, MfE Massey University, Tindall Foundation	Ongoing	Data availability varies by region and by site. Water quality principally includes bacteria, clarity, nitrogen, phosphorous. Raw values are available. Data is presented in quartiles. Some sites presented against NOF levels (A-D rating).	Regional council monitoring data

Government projects (continued)

Project name	Project description	Lead agency / person	Project status	Indicator data collected	Data sources
Situation and Outlook for Primary Industries (SOPI)	Shows historical and forecast export volume, prices, and revenue for the primary industries. Actual and provisional data are sourced from Statistics NZ, and the forecast data are provided by the MPI economic data and analysis team.	MPI	Ongoing	Export volume, price and revenue data across the primary sector	Statistics NZ, MPI
Agricultural Production Census/Survey	Every five years a census of agricultural production is carried out. Information is collected by questionnaire (postal or online) by farmers across 60,000 farms. In years without a census, a survey of a smaller number of farmers is completed instead. http://www.stats.govt.nz/survey-participants/a-z-of-our-surveys/agricultural-production-survey.aspx	Statistics NZ / MPI	Ongoing	Animal numbers, land use and land area, crop area and harvest, irrigation and fertiliser use, nutrient planning practices	Statistics NZ
Agricultural GHG Inventory	This model and database support the annual calculation of New Zealand's Agricultural GHG emissions for New Zealand's statutory annual reporting under the UNFCCC.	MPI Inventory reporting team	Ongoing	Total GHG emissions by agriculture sector, including animal performance and numbers data. 25 years of data commencing 1990	Statistics NZ DairyNZ, Beef and Lamb, Slaughter statistics MPI
National Exotic Forest Description (NEFD)	The National Exotic Forest Description (NEFD) is a Tier 1 statistic of New Zealand's planted production forest estate (i.e. forest planted with the primary intention of producing wood or wood fibre). From its inception, the data captured has been required to be used for: <ul style="list-style-type: none"> • Wood availability forecasting • Monitoring changes to the forest resource through time • Planning and investment analysis by the forest industry • Policy and reporting obligations. 	MPI Economic Data and Analysis team	Ongoing	Forest ownership; Area and standing volume; harvesting and planting estimates; yield tables; age class distributions	Forest owners

Industry projects

Project name	Project description	Lead agency / person	Project status	Indicator data collected	Data sources
New Zealand Farm Assurance Programme	A unified audit system for farmers to demonstrate integrity, origin, traceability, bio-security, environmental sustainability and animal health and welfare.	The Red Meat Profit Partnership	Ongoing. Established June 2017	Compliance with a unified set of standards across meat processors across a range of sustainability, food-safety and animal welfare issues.	Farmers via meat processors
Sheep and Beef Farm Survey	Annual survey of 500 beef and sheep farmers to gather economic and production information.	Beef+Lamb NZ	Annual	Detailed information about on farm economics and production.	Direct survey data
Dairybase	Central database for financial and production data for the dairy sector. ~3000 farms involved. Semi-commercial. Farms join voluntarily for commercial benchmarking. Data is anonymised and standardised to produce a sample that is representative of the wider industry.	DairyNZ	Ongoing. Data collected annually	Indicators can be derived from the wide range of financial and production statistics collected at a farm level Operating profit/ha, working expenses/kgMS, return on assets, return on equity, growth in equity, discretionary cash Cow efficiency (MS/liveweight), Pasture eaten, energy eaten, total supplements used (kg DM/cow)	Participating dairy farmers

Industry projects (continued)

Project name	Project description	Lead agency / person	Project status	Indicator data collected	Data sources
Dairy Industry Good Animal Database (DIGAD)	<p>Database of genetic information on dairy herd.</p> <p>Data collected at cow/herd level and can be aggregated to industry level.</p> <p>Data provided by famers seeking commercial services. Dairy NZ can do industry-good work with the data at a sector level.</p>	Dairy NZ (migrated from LIC)	Ongoing	Animal genetic performance across a range of traits, productivity, fertility, longevity, emissions	Participating dairy farmers
Sustainable Milk Plans	<p>Action plans at the farm level for minimising environmental impact, particularly on waterways.</p> <p>Plans are aggregated at the catchment level to describe expected future changes from mitigating actions planned.</p>	Milk processors (principally Fonterra) & Dairy NZ	Ongoing	N/A – describes activities but does not collect indicator data	Participating dairy farmers

Science-led projects

Project name	Project description	Lead agency / person	Project status	Indicator data collected	Data sources
Wheel of water programme	<p>The Wheel of Water is a 6-year government-funded research of collaborative decision making for setting water quality and quantity limits in New Zealand. The project supports integrated decision making and processes that take into account environmental, economic, social and cultural implications at the catchment scale.</p> <p>The programme has developed a Waterwheel diagram used to illustrate different values held about water use and indicators of the state of each. More information can be found at:</p> <p>https://wheelofwater.wordpress.com/</p>	<p>Aqualink – John Bright</p> <p>With Landcare and AgResearch</p>	Ongoing	<p>Describes indicators across five categories of water use: economic, recreation, ecosystem, drinking water, fishing and cultural.</p> <p>A 2012 paper covered indicators in depth: <i>Effective indicators for freshwater management: attributes and frameworks for development</i>. A model of the effects of limit setting is in development.</p>	<p>Working with collaborative limit setting groups in Takaka (Tasman) and Ruamahanga (Greater Wellington)</p>
Wine Dashboard	Development of sustainability indicators in the wine industry.	New Zealand Sustainability Dashboard – Andrew Barber	Ongoing	Energy, water and agricultural use on farm	Sustainable Winegrowing members
Kiwifruit Dashboard	Development of sustainability indicators for the kiwifruit industry and creation of a bespoke online assessment system.	New Zealand Sustainability Dashboard – Jayson Bengé (The Agribusiness Group)	Ongoing	Orchard level – energy and water use, waste, community donations. Can be aggregated to industry level	Participating orchards
Kohura – A sustainability dashboard for Māori collectively owned asset holders	Development of a multi-tiered comprehensive sustainability indicator framework grounded in kaupapa Māori but generalizable across multi sectors and industries. Provides full sustainability assessments of Māori corporate dairy and sheep and beef farming operations. Centred with Ngāi Tahu. Assessments are based on primarily practice-based indicators and a limited suite of key performance indicators.	New Zealand Sustainability Dashboard – John Reid	Ongoing	Multi layered – from farm level to organisational governance level	Various Māori organisations including Te Rūnanga o Ngāi Tahu, Ngāti Awa and the office of the Māori Trustee

Science-led projects (continued)

Project name	Project description	Lead agency / person	Project status	Indicator data collected	Data sources
DELV	Linked to the Kohura project but with broader applications. A cloud-based framework to facilitate the capture and storage of sustainability indicator data within an organisation, catchment, or industry. Also confronting issues around the aggregation and communication of sustainability data.	New Zealand Sustainability Dashboard – John Reid	Ongoing	Flexible – from on farm data to Corporate Social Responsibility type reporting	
Biodiversity Indicator Development	Development and testing of biodiversity indicators. Linked to similar international initiatives with Cool Farm.	New Zealand Sustainability Dashboard – Catriona Macleod (Landcare Research)	Ongoing	On farm	
Data scales and aggregation	Simulation study to investigate issues around making reliable inferences from sustainability data. Investigating aggregation issues and power to detect change in sustainability indicators.	New Zealand Sustainability Dashboard – Andrew Gromley (Landcare Research)	Ongoing	Simulated data	
Network mapping of indicators and identification of high priority indicators	Producing network maps of multiple domestic and international sustainability assessment frameworks to develop an understanding of the saliency of certain indicators.	New Zealand Sustainability Dashboard – Jay Whitehead (AERU – Lincoln University)	Ongoing	Existing indicator frameworks	
New Zealand National Dashboard	Development of a national dashboard reporting on a small range of cross industry sustainability indicators.	New Zealand Sustainability Dashboard – Jay Whitehead (AERU – Lincoln University)	Ongoing	In progress	

Science-led projects (continued)

Project name	Project description	Lead agency / person	Project status	Indicator data collected	Data sources
Interactive indicator dashboard development	Development of online interactive dashboards to report assessments of sustainability indicators. Occurring in conjunction with multiple sustainability indicator development work streams to ensure compatibility.	New Zealand Sustainability Dashboard – Jay Whitehead, Andrew Barber, Jayson Bengel, Aaron Rimmer, John Reid (Multiple agencies)	Ongoing	Industry Level Data	
Target setting and differentiation for sustainability indicators	Investigating the implications of setting sustainability indicator targets at different levels for different farmers based on external and internal contextual factors.	New Zealand Sustainability Dashboard – Jay Whitehead	Ongoing		
Towards Sustainable and Resilient Agriculture (TSARA)	This is a case study of New Zealand indicators for the broader TSARA project run out of Europe. The project examined the feasibility of developing a typology of New Zealand farming activity and linking it to meaningful indicators for tracking progress towards agriculture related Sustainable Development Goals. The wider project aims to use the case studies to inform their model for developing pathways to achieving the Sustainable Development Goals.	PwC (on behalf of Our Land and Water NSC and AgResearch) Bill Kaye-Blake	Case study completed Wider project ongoing	In progress	Multiple
TempAg – Testing indicators of resilience for rural communities	This study investigated the feasibility of using official statistics for the purpose of measuring resilience, and tested the possibility of identifying resilience thresholds for particular indicators. The study used community workshops to investigate the drivers of self-reported resilience among residents of four rural communities in New Zealand, and then compared the self-reported ratings against indicators from official data sources.	PwC (on behalf of Our Land and Water NSC and AgResearch) Bill Kaye-Blake	Stage 1 completed. Stage 2 in planning phase.	Social, economic, cultural, institutional indicators at the Ward scale for four towns. Environmental data at the regional scale for two regions.	Statistics NZ Ministry for the Environment

Science-led projects (continued)

Project name	Project description	Lead agency / person	Project status	Indicator data collected	Data sources
Climate change impacts on land use suitability	This project is looking at the climate variables most impacting the land use suitability for key primary sectors (arable, pastoral farming and horticulture). It aims to develop spatial information based on relevant indicators for future changes in both productivity and impacts on receiving environments.	Landcare Research (on behalf of Deep South NSC)	Project initiated in March 2017. Ends June 2019.	Development of indicators for production and environment impacts (nitrate leaching and sediment loss) changing with climate	
Ecosystem services status and trends	This project was an MBIE-funded programme 2009-2013 that has now been incorporated into Landcare Research's core funding. The result of the project was a series of spatial maps of ecosystem services indicators for water regulation, erosion control, climate regulation, food provision and habitat provision. The information is now being used to test if they can be incorporated into a System of Environmental Economics Accounting.	Landcare Research	Ongoing	Ecosystem services indicators for water regulation, erosion control, climate regulation, food provision and habitat provision.	
PFR Land use suitability	This project is looking at defining the concept of land use suitability and testing the approach with a spatial framework	Plant and Food Research (aligned funding to OLV NSC), Landcare Research	Project started Jan 2017	Development of indicators for crop suitability, ecosystem services, landscape and soil functions	

Appendix A: List of agencies involved in stocktake

The following agencies were invited to contribute to the stocktake:

- Ministry for Primary Industries
- Ministry for the Environment
- Lincoln University
- AgResearch
- Landcare Research
- The Sustainability Dashboard
- Beef+Lamb New Zealand
- Dairy New Zealand.
